

## MCS 220 HOMEWORK 2

1. Let  $F$  be a field and  $a, b, c$  elements in  $F$ . Prove the following statements.
  - (a) The additive inverse of an element  $a$  is unique. That is if  $b$  and  $c$  are both additive inverses of  $a$ , then  $b = c$ .
  - (b) If  $a \neq 0$ , then the multiplicative inverse of  $a$  is unique. That is if  $b$  and  $c$  are both multiplicative inverses of  $a$ , then  $b = c$ .
  - (c)  $0a = 0$ .
  - (d)  $ab = 0$  if and only if  $a = 0$  or  $b = 0$ .
  - (e)  $(-1)a = -a$ . Hint: remember that  $-a$  means the additive inverse of  $a$ .
  - (f)  $-(-a) = a$ .
2. Let  $F$  be an ordered field and  $a, b, c$  elements in  $F$ . Prove the following statements.
  - (a) If  $a < 0$  then  $-a > 0$ .
  - (b) If  $a < b$  and  $c < 0$  then  $ac > bc$ .
  - (c)  $0 \leq a^2$ .
  - (d)  $0 < 1$ .
  - (e) If  $0 < a$  then  $0 < a^{-1}$  and if  $a < 0$  then  $a^{-1} < 0$ .
  - (f)  $0 \leq |a|$ .
  - (g)  $|ab| = |a||b|$ .
